## Topic

Collecting And  
Analyzing Statistics On  
the girl child with  
Reference to Gender  
Ratio.

## Objectives

- 1) To study the status of sex ratio at with increasing birth order.
- 2) To ascertain the relationship of decline sex ratio with rest to socio demograp factors.
- 3) To study outlook to patient towards preference, willingness to determine the fetus, wish to terminate the pu in case of unwanted sex of the baby

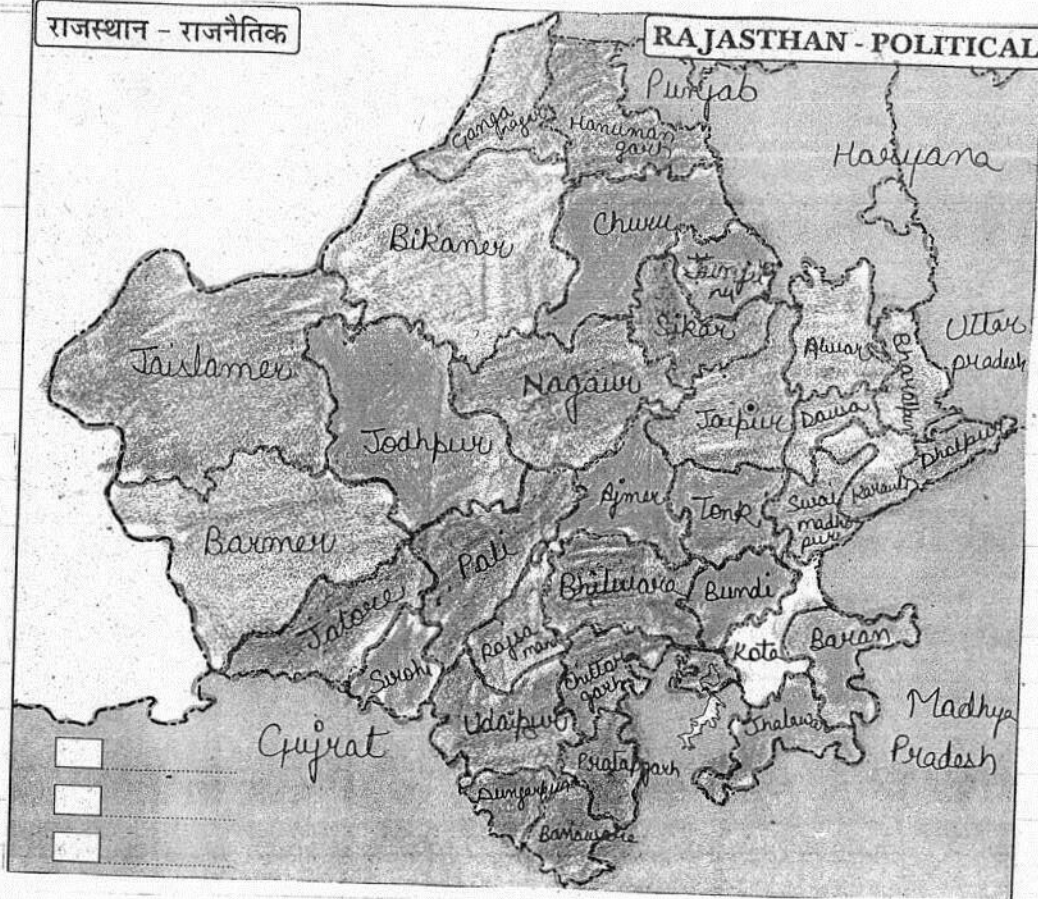

## Methods

This is retrospective study done in department of obstetrics and Gynaecol Nourasjee Wadia maternity hospital, Parel, Mumbai. The data was collected from records maintained in medical record department from Janu 2001 to December 2012, and were studied to determine the sex ratio as well as its relationships with the increasing parity.

selection.

- 1) At birth, boys out number girls everywhere in the world, by almost the same proportion, there are around 105 or 106 male children for every 100 females children.
- 2) So, the biology of reproduction leads to this result, remains a subject of debate. However, after conception, biology seems overall to favour women.

## Discussion

Nationwide, the overall sex ratio of birth in 2011, census has improved by 7.1 points to 940 against 933 in census of 2001.

This is the highest sex ratio at the national level since census of 1971.

In present study, average sex ratio for 6 years was 908 females born per 1000 live born males (0.97), which is less than the expected 952 females for every 1,000 males,

95% confidence interval for the sex ratio was calculated.

## Introduction

"It is no exaggeration to call this gender circle".  
Women are missing in their millions aborted, killed neglected to death.

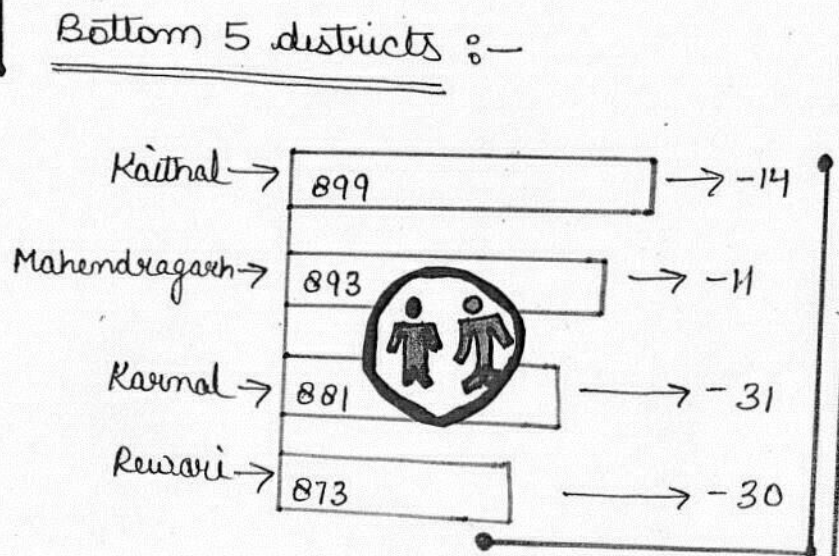

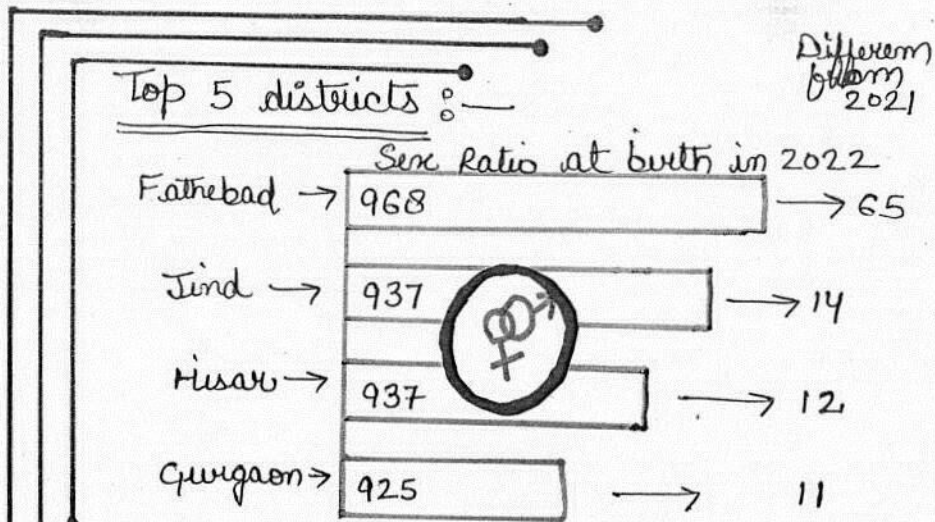

Sex ratio is the ratio of males to females in a population. The primary Ratio of Sex is the ratio at the time of conception, Secondary Sex Ratio is the ratio at time of birth and Tertiary sex Ratio is the ratio of mature organism.

## Definition

The "Sex ratio at birth", defined as the number of girls born for every 1000 boys born, is a more accurate and refined indicator of the extent of prenatal sex

people.

Education has not altered or sensitized society to the rights of women and the dismal sex ratio in the upper echelons of society.

Rising sex ratio at birth (ratio favouring male child) in India has been recorded since the early 1980s, which marks the introduction of ultrasound in the fields of obstetrics. Since then, it has been increasing but with no sign, so far, of reversing the course.

After introduction and widespread strict implementation of Pre-natal Conception and Prenatal Diagnostic Technique Act in 1994, sex ratio at birth in India has started showing improvement.

## Results

Average sex ratio of 6 years was 908 females per 1,000 males.

PRINCIPAL  
BIYAN GIRLS B.ED. COLLEGE  
SEC-3, VIDHYADHAR NAGAR, JAIPUR

Sex ratio was 972 females per 1,000 males in Purnipara, which decreased to 879 females per

1000 males in fourth column.

## Conclusion

So the 'sex ratio at birth', defined as the number of girls born for every 1,000 boys born, is a more accurate and refined indicator of the extent of prenatal sex selection.

The government has taken action on strengthening the Pre-Conception & Pre-Natal Diagnostic Technique Act (PC & PNDT ACT) as well as creating awareness on the issue through various mechanisms. We, as a community of doctors, should participate actively in correcting this imbalance, by first, not doing sex determination, prohibiting our doctor friends from doing so, utilizing the opportunity by educating every patient coming to us about the seriousness of the issue and doing surveillance of this problem at every possible step.

## Girl Child Ratio with reference to Gender Ratio Survey Questionnaire.

1) What Gender are you?

Any Male

2) What is your name and occupation?

Any - Moham Singh, Teacher

3) What is your spouse name and her occupation?

Any - Veena Singh, Teacher

4) How many members in your family?

Any - 4 Four Members (4)

5) How many children do you have?

Any - 2

6) What are your children do in his/her career?

Any - Sandeep - Software Engineer

Shubhum - Lecturer

7) Do you think that men & women are equal?

Any - Yes.

8) Do you think that men and women are equal in your home, school, workplace etc?

Any - Yes.

I survey 10 houses of my colony.

The Gender ratio is :-

Boys = 8

Girls = 11

Average ratio of 6 years was 908 female as per 1,000 males.

Primary Sex ratio = at the time of concepti

Secondary Sex ratio = at the time of birth.

Tertiary sex ratio = natural organism.

Gender equality is not only a fundamental human right but a necessary foundation for a peaceful, prosperous and sustainable world.

There has been progress over the last decade but the world is not on track to achieve gender equality by 2030.

Girl Child Ratio with Reference to Gender Ratio Survey Questionnaire.

1) What Gender are you?

Ans - Male

2) What is your name and occupation?

Ans - Beijesh Ghosliya, Doctor in Manipal hospital

3) What is your spouse name and her occupation?

Ans - Mamta, Housewife

4) How many members in your family? 6

5) What are your children do in his/her career?

Ans - Priya - Nurse in CKS hospital

Shulpa - Professor in Menta College

Simran - Assistant in Science Lab

Rohit - Pursuing B.Tech

6) How many children do you have? 4

7) Do you think about men and women are equal?

Ans - Fully Agree.

8) Do you think that men & women are equal in your home, school, workplace etc?

Ans - No.
