## X SHANNON-WEAVER'S MODEL OF COMMUNICATION

**Sender** : The originator of message or the information source selects desire message

**Encoder** : The transmitter which converts the message into signals

**Decoder** : The reception place of the signal which converts signals into message. A reverse process of encode

**Receiver** : The destination of the message from sender

**Noise**: The messages are transferred from encoder to decoder through channel. During this process the messages may distracted or affected by physical noise like horn sounds, thunder and crowd noise or encoded signals may distract in the channel during the transmission process which affect the communication flow or the receiver may not receive the correct message
